# Introduction

## Project Overview

---

MangaVerse is a project developed for the Large-scale and multi-structured databases course of the University of Pisa. This web application aims to provide users with a comprehensive platform to explore, search, and interact with a vast collection of manga and anime. Users can register, personalize their profiles, and engage in a community. The platform also offers a set of features for registered users, such as liking media contents, following other users, adding reviews and ratings. Additionally, users receive personalized suggestions based on their preferences and current trends. The site manager has access to detailed analytics about media contents and user activities.
